

MOTION CONTROL

Full Arc

A Finite System for Controlled Harmonic Motion

Four states. Seven arcs. One architecture.

Root: C

Character: Structural

[Back to system](#) [Open Full Arc](#)

Why This Works

STATE DEFINES

- Harmonic motion
- Compression / widening
- Dissolve thinning

CHARACTER DEFINES

- LH density
- RH articulation feel
- Arrival voicing

Nothing overlaps. Nothing collides. No cognitive explosion.

The harmonic skeleton remains stable. Only the motion engine changes.

The Four States

● Containment

LH Engine: Pulse Octaves

MECHANICAL IDENTITY

- Fixed floor
- Internal rotation
- Controlled friction
- No release

OTHER CHARACTERS

Elastic: LH: upper floor (beat 1 & 3). RH: block strike. Arrival: A–D–F.

Interwoven: LH: upper floor (beat 1 & 3). RH: staggered entry. Arrival: D–A (transparent).

Atmospheric: LH: upper floor (beat 1 only). RH: sparse strike. Arrival: A–D / D–A shift (final grounding).

BONUS: HOW TO COLLAPSE IT ON PURPOSE

Hard Collapse (immediate)

- Break the floor timing (uneven LH destroys compression immediately).
- Turn the top into a melody (continuous top-line phrasing releases pressure immediately).
- Change density mid-loop (adding/removing notes breaks identity immediately).

Soft Degradation (weakens state)

- Over-pedal (friction blurs; state weakens).
- Rush cell changes (pressure never settles; state weakens).

● Expansion

LH Engine: Breath Floor

MECHANICAL IDENTITY

- Floor shift
- Vertical widening
- Span increase

OTHER CHARACTERS

Elastic: LH: upper floor (beat 1 & 3). RH: block strike. Arrival: A–D–F.

Interwoven: LH: upper floor (beat 1 & 3). RH: staggered entry. Arrival: D–A (transparent).

Atmospheric: LH: upper floor (beat 1 only). RH: sparse strike. Arrival: A–D / D–A shift (final grounding).

BONUS: HOW TO COLLAPSE IT ON PURPOSE

Hard Collapse (immediate)

- Keep pounding LH like a motor (expansion collapses into containment immediately).
- Widen too fast (jump to extremes; expansion logic breaks immediately).
- Shift floor early (floor moves before the frame is full; expansion breaks immediately).

Soft Degradation (weakens state)

- Overfill inner voice (width becomes thick; openness weakens).
- Over-pedal (edges blur; widening becomes less readable).

Dissolve

LH Engine: Anchor Pulse

MECHANICAL IDENTITY

- Structural thinning
- Note removal
- Compression toward anchor

OTHER CHARACTERS

Elastic: LH: upper floor (beat 1 & 3). RH: density alternates (triad ↔ dyad). Arrival: A–D–F.

Interwoven: LH: upper floor (beat 1 & 3). RH: staggered entry makes drift audible. Arrival: D–A (transparent).

Atmospheric: LH: upper floor (beat 1 only). RH: sparse strike. Arrival: A–D / D–A shift (final grounding).

BONUS: HOW TO COLLAPSE IT ON PURPOSE

Hard Collapse (immediate)

- Keep adding notes (thinning stops; dissolve breaks immediately).
- Move the floor (bottom starts shifting; dissolve becomes a different state immediately).
- Release everything at once (no gradual thinning; dissolve becomes an abrupt cut immediately).

Soft Degradation (weakens state)

- Make the inner too dramatic (big leaps; drift starts reading like melody).
- Over-pedal (thinning becomes unclear; state weakens).

Arrival

LH Engine: Single Anchor Strike

MECHANICAL IDENTITY

- Stable stack
- Open width

- Vertical clarity

OTHER CHARACTERS

Elastic: Arrival voicing: A–D–F (warm bloom without stretch).

Interwoven: Arrival feel: staggered entry; transparent D–A landing.

Atmospheric: Arrival feel: A–D / D–A shift with final grounding.

BONUS: HOW TO COLLAPSE IT ON PURPOSE

Hard Collapse (immediate)

- Restart a motor pulse (arrival collapses into containment immediately).
- Move the floor (any stepwise LH motion turns landing into drift immediately).
- Change density mid-bar (extra notes or removals during the bar break stability immediately).

Soft Degradation (weakens state)

- Overfill inner tones (width shrinks; arrival becomes thick).
- Rush the landing (stability never forms; arrival feels accidental).
- Add chromatic movement (destination clarity weakens; starts feeling like dissolve).

LH ENGINE PER STATE

State	LH Engine Type
Containment	Pulse Octaves
Expansion	Breath Floor
Dissolve	Anchor Pulse
Arrival	Single Anchor Strike

Simple. Mechanical. Deterministic.

Character System

Character does not change harmony.

Character changes density, timing feel, and Arrival identity.

Structural

- LH: octave pulse (4 beats)

- RH: block strike (simultaneous)
- Arrival: D–A–D (stable stack)

Use when: You want clarity and architectural authority.

Elastic

- LH: upper floor (beat 1 & 3)
- RH: block strike (simultaneous)
- Arrival: A–D–F (warm bloom)

Use when: You want lift without losing control.

Interwoven

- LH: upper floor (beat 1 & 3)
- RH: staggered entry (bottom → inner → top)
- Arrival: D–A (transparent landing)

Use when: You want voice separation and space.

Atmospheric

- LH: upper floor (beat 1 only)
- RH: sparse strike (fewer attacks)
- Arrival: A–D / D–A shift (final grounding)

Use when: You want suspended weight.

Arrival Variations

VISUAL COMPARISON

Character	Arrival RH Shape
Structural	D–A–D
Elastic	A–D–F

Character	Arrival RH Shape
Interwoven	D–A
Atmospheric	A–D / D–A shift

Arrival is the only place where vertical identity changes dramatically.
This is intentional.

The Seven Arcs

1. Containment → Expansion → Dissolve → Arrival

- Containment
- Expansion
- Dissolve
- Arrival

ARCHITECTURE (ROOT C, STRUCTURAL)

How to Practice

- Never change state mid-loop.
- Character only modifies articulation.
- Practice each state independently before running arcs.
- Run arcs only once per repetition.

System Closure

Motion Control is finite.

There are no hidden states.

Mastering density and release inside a fixed architecture is the point.
